Mark out 2-30" and 2-18" cuts on the 2x4

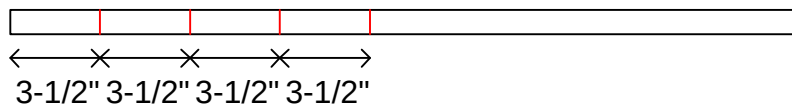

Mark a 15" center on the 2 30" legs

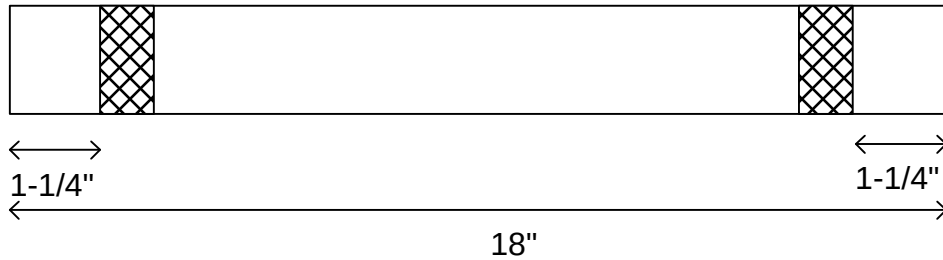

Mark 3/8" on either side of the 15" center, then mark 1-1/2" further out. This is your guide for assembling the legs to the centers.

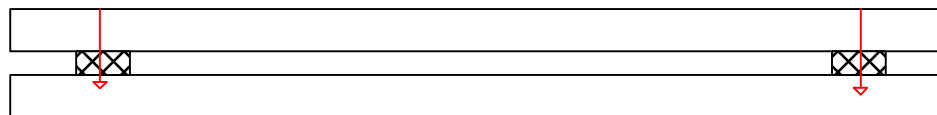

Cut the 2x4 so you have 2-30" and 2-18" pieces.

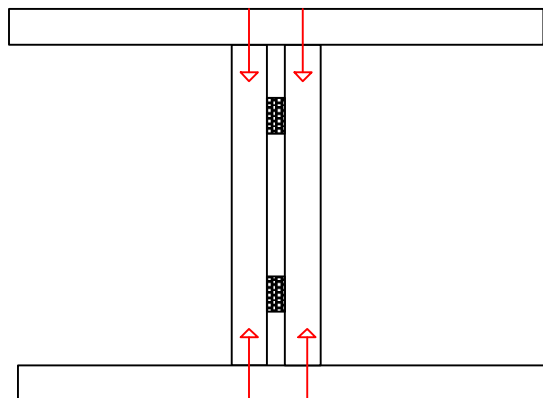

Cut a 1x2 into 3-1/2" lengths. You need 2 of these for each target stand. Also, cut some cardboard or shims to be the same size as these 1x2 pieces. They will be stacked on top of each other as spacers.

Use duct tape to tape the 1x2 and shim at least 1-1/4" from the ends of one 18 inch piece

Screw the 2 18" boards together, keeping the ends even. Drilling a pilot hole will keep the 1x2s from splitting.

Screw the 30" boards to the center 18" boards with 4 screws on either side. Keep them all flat. Now you can use upright 1x2s to staple cardboard targets to. The spacers keep the 1x2s from falling over.
Enjoy your new target stands.
