Presentation from Low Ready – Weak Hand Only	5 reps @ 1.5 seconds
Pick up pistol from Table – Fire 2 shots to body Freestyle	5 reps @ 2.0 seconds
Trigger Press Practice – Freestyle	5 reps un-timed

Dry Fire Safety Procedures

- Dry fire ONLY when you are alert and focused.
- Dry Fire should be a structured session. Impromptu dry fire sessions are extremely dangerous and often lead to Negligent Discharges.
- 1) Unload your pistol in an area other than the practice area and do not take any ammunition with you to the practice area. 2) Go to your practice area where there is NO LIVE AMMUNITION. 3) Check your pistol again to ensure that there is no ammunition in the pistol or any magazines or speedloaders you will use for practice.
- Dry fire practice only on a specific dry fire target that is used only for dry fire practice.
- Place your dry fire target against a bullet resistant wall, e.g., brick or concrete block.
- Under no circumstances should the dry fire target be placed against a wall adjoining a room where people are present. In the event of a Negligent Discharge, handgun bullets will penetrate almost all interior walls.
- If a bullet resistant wall is not available, a body armor panel capable of containing a bullet from your pistol should back the target.
- Do not allow yourself to be disturbed during dry fire practice.
- Wear eye protection when dry firing in case of a Negligent Discharge.
- If you use dummy ammunition during dry fire, use ONLY easily identifiable dummies.
- When you are finished practicing, put your dry fire target and pistol away immediately and do some other action that will remove dry fire from your thoughts. Do NOT immediately reload your pistol.

Failure to follow these procedures EXACTLY can result in DEATH OR SERIOUS INJURY.

Firearms Safety Training LLC has no control over others' dry fire sessions and is not responsible for any injuries, death, damage to property, etc. that occurs when our materials are used by others.
